Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 August 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statements filed 9/04/02 and 9/12/03 are acknowledged. See enclosed IDS forms.

Drawings

3. Figures 6a-6c should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

It is also noted that Figure 6(a) does not have a figure label (i.e., it does not say --Figure 6(a)--).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3616

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-7 and 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keshavaraj (6,502,853).

Keshavaraj discloses a side airbag comprising: an two inner layers of material (6) joined at a seam (10) and an outer shell fabric (8; see also column 2, lines 59-61) superposed on outer surfaces of the inside material on the cabin side and window side; wherein the outer shell fabric is bonded to the base at the seams (column 3, lines 53-58) by adhesive (see column 4, lines 11-14). The inner bag is constructed to two separate layers joined together (see column 2, lines 57-58). The inner sheets are also joined by interior seams (12; see Figure 3B).

Keshavaraj fails to show the cushion sheets being a fabric or being sewn together.

Ono discloses a side airbag comprising: an inflatable cushion comprising a window side sheet (23; in final state of Figure 3) and a passenger side sheet (22), wherein the sheets are sewn together along a seam (S12) and the sheets area fabric ("cloth"; see column 4, lines 60-65); Ono also shows a reinforcement layer (24) attached at the seams. Ono also teaches the use of joining the sheets by adhesive.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Keshavaraj with the teachings of Ono in order to provide a cheaper airbag constructed of cheaper materials if required by cost considerations.

6. Claims 8 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keshavaraj in view of Ono as applied above, and further in view of Kitamura (5,707,711).

The combination of Keshavaraj and Ono is discussed above and fails to show cloth patches that cover the interior seams.

Art Unit: 3616

Kitamura teaches an airbag having interior tether seams (4) with a reinforcement portion (5) over the seam.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combination of Keshavaraj and Ono with the teachings of Kitamura in order to better seal the airbag along the seams.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Butters et al. shows a side air bag with outer cover layer. Hill et al. shows a side airbag with an outer layer. Veiga et al. shows an airbag with a protective layer. Kishi et al. shows an airbag of interest.
